ALEX • KASKASOLI

README

Ten years across security and platform engineering, much of it building what didn't exist yet. At Google DeepMind I threat modelled production ML deployments, and launched the AI cybersecurity safety evaluation programme, running agents against vulnerable-by-design systems in sandboxed k8s environments. The framework I started went on to run most of DeepMind's safety evaluations, not just cyber.

As Head of DevOps and Security and as a Tech Lead Security Engineer, I owned infrastructure and security end to end across AWS and GCP: CI/CD pipelines with SAST/DAST and dependency scanning, cloud organisations designed from scratch, k8s hardening, Prometheus and Grafana observability, and guardrails engineers adopted rather than routed around.

Before that, four years of red team and application security consulting against large finance and critical-infrastructure clients, often exploiting CI/CD and DevOps tooling for lateral movement, and debriefing defenders on their detection gaps.

BLOG

My blog https://alex.kaskaso.li showcases personal work, talks, open-source projects and papers I collaborated on, including CI/CD security thinking cited on Google's Kubernetes podcast and an AWS cloud attack nominated for PortSwigger's "best hacks of 2018".

SKILLS

AI & ML Security

Threat modelled production ML deployments at Google DeepMind and built its first cybersecurity safety evals. Credited on DeepMind's dangerous capability evaluations and SynthID papers.

Cloud & IAM

Production experience across AWS and GCP. Designed multi-account AWS orgs from scratch, with org-wide log centralisation and security guardrails, and built bespoke IAM tooling to balance security and developer velocity.

CI/CD & AppSec

Built GitOops (600+ stars), an open-source tool for attacking and defending CI/CD pipelines; spoke on CI/CD security at BSides London. Wired SAST, DAST and dependency scanning into pipelines. Early Terraform adopter.

Coding

Shipped production tooling in Python and Go; worked with JavaScript, C. Now coding daily with AI harnesses (Claude Code, opencode).

Monitoring & Response

Set up and ran Prometheus and Grafana in production, and worked with Datadog. Remediated production incidents and ran the postmortems.

Kubernetes

Researched and wrote about k8s privilege-escalation paths (including a CVE for RCE/VM escape in minikube). Ran and hardened production clusters, and wrote custom k8s controllers.

EXPERIENCE

Google DeepMind

3 years — *London, UK*

Security SWE in a cross-team function. Owned cybersecurity safety evaluations, building the initial framework and running the external vendor engagements behind it. Threat modelled production ML deployments, driving remediations to resolution across engineering teams; adversarially tested image/text watermarks.

Kaluza / OVO Energy

2 years — *London, UK*

Tech Lead Security Engineer securing a large (100+ account) cloud organisation across AWS and GCP. Set security standards for 20+ engineering teams and ran org-wide remediation and uplift programmes, automating controls and fixing vulnerabilities with the teams that owned them.

TrueLayer

1 year — *London, UK*

Security Engineer promoted to Head of DevOps and Security, leading a team of four to scale infrastructure, mature DevOps practices, mitigate security risks and meet regulatory compliance. Worked alongside ISO 27001 consultants, translating compliance requirements into infrastructure-as-code policy. Owned external security vendor and pentest engagements end to end.

MWR InfoSecurity

4 years — *London, UK*

Security Consultant working on infrastructure and application security and red team simulated attacks against monitored environments. Clients across industries from finance to critical infrastructure.

CERTIFICATES

OSCP, OSCE, CRT, CCT

Graduate-level MicroMasters credential in Statistics and Data Science (MITx)

BSc Ethical Hacking & Countermeasures (University of Abertay)
