

ALEX ● KASKASOLI

README

Ten years in security engineering, from red teaming to founding the cybersecurity safety evaluation programme at Google DeepMind, where I threat modelled production ML deployments and ran agents and vulnerable-by-design systems in sandboxed k8s environments.

As Head of DevOps and Security and as a Tech Lead Security Engineer, I owned application and cloud security end to end: SAST/DAST and dependency scanning built into CI/CD, AWS organisations designed from scratch, k8s hardening, and security guardrails engineers adopted rather than routed around. I've translated regulatory requirements into infrastructure-as-code policy, and managed external security vendors and pentest engagements.

Before that, four years of red team and application security consulting against large finance and critical-infrastructure clients, often exploiting CI/CD and DevOps tooling for lateral movement.

BLOG

My blog <https://alex.kaskaso.li> showcases personal work, talks, open-source projects and papers I collaborated on, including CI/CD security thinking cited on Google's Kubernetes podcast and an AWS cloud attack nominated for PortSwigger's "best hacks of 2018".

SKILLS

Cloud & IAM Designed multi-account AWS orgs from scratch, including org-wide log centralization and security guardrails. Built bespoke IAM tooling when necessary to balance security and developer velocity.	CI/CD & AppSec Built and maintain GitOops , an open-source tool for attacking and defending CI/CD pipelines; spoke on CI/CD security at BSides London . Wired SAST , DAST and dependency scanning into pipelines. Early Terraform adopter.	Kubernetes Researched and wrote about k8s privilege-escalation paths (including a CVE for RCE/VM escape in minikube). Ran and hardened production clusters, and wrote custom k8s controllers for bespoke needs.
Email & Comms Security Practical experience hardening collaboration and comms security (email, Slack). Built tooling to scan for email protocol misconfigurations, and blogged on the topic.	Coding Ship production tooling in Python and Go . Comfortable in JavaScript , some C and Assembly for offensive tooling and memory corruption research.	ML / AI Security Threat modelled production ML deployments at Google DeepMind and built its first cybersecurity safety evals , running agents against vulnerable-by-design targets.

EXPERIENCE

Google DeepMind

Security SWE in a cross-team function: threat modelled production ML deployments, translating findings into remediations and driving them to resolution with engineering teams. Built the initial framework for cybersecurity safety evaluations and ran the external vendor engagements behind it; adversarially tested image/text watermarks.

3 years

London, UK

Kaluza / OVO Energy

Tech Lead Security Engineer securing a large (100+ account) cloud organisation, automating security controls, identifying attack paths and driving remediations. Wrote the secure development guidelines and trained engineers against them.

2 years

London, UK

TrueLayer

Security Engineer promoted to Head of DevOps and Security. Led a team of 3 to scale infrastructure, mature DevOps practices, mitigate security risks and meet regulatory compliance. Ran external security vendor and pentest engagements end to end.

1.5 years

London, UK

MWR InfoSecurity

Security Consultant working on infrastructure and application security and red team simulated attacks, for clients across industries from finance to critical infrastructure.

4 years

London, UK

CERTIFICATES

OSCP, OSCE, CRT, CCT

Graduate-level MicroMasters credential in Statistics and Data Science (MITx)

BSc Ethical Hacking & Countermeasures (University of Abertay)
