

ALEX ● KASKASOLI

README

Ten years across security and platform engineering, much of it building what didn't exist yet. At Google DeepMind I threat modelled production ML deployments, then founded the cybersecurity safety evaluation programme, running agents against vulnerable-by-design systems in sandboxed k8s environments. The framework I built went on to run most of DeepMind's safety evaluations, not just cyber.

As Head of DevOps and Security and as a Tech Lead Security Engineer, I owned infrastructure and security end to end across AWS and GCP: CI/CD pipelines with SAST/DAST and dependency scanning, cloud organisations designed from scratch, k8s hardening, Prometheus and Grafana observability, and guardrails engineers adopted rather than routed around.

Before that, four years of red team and application security consulting against large finance and critical-infrastructure clients, often exploiting CI/CD and DevOps tooling for lateral movement. Four years of learning to follow a thread across application, infrastructure and pipeline until I found where it actually broke.

BLOG

My blog <https://alex.kaskaso.li> showcases personal work, talks, open-source projects and papers I collaborated on, including CI/CD security thinking cited on Google's Kubernetes podcast and an AWS cloud attack nominated for PortSwigger's "best hacks of 2018".

SKILLS

AI & ML Security	Cloud & IAM	CI/CD & AppSec
Threat modelled production ML deployments at Google DeepMind and built its first cybersecurity safety evals . Credited on DeepMind's dangerous capability evaluations and SynthID papers.	Production experience across AWS and GCP . Designed multi-account AWS orgs from scratch, with org-wide log centralisation and security guardrails, and built bespoke IAM tooling to balance security and developer velocity.	Built and maintain GitOps (640 stars), an open-source tool for attacking and defending CI/CD pipelines; spoke on CI/CD security at BSides London . Wired SAST , DAST and dependency scanning into pipelines. Early Terraform adopter.
Coding	Observability & Ops	Kubernetes
Ship production tooling in Go and Python ; comfortable in JavaScript . Now building daily with Claude Code .	Set up and ran Prometheus and Grafana in production, and worked with Datadog . Comfortable in Postgres and other datastores. Have remediated production incidents and run the postmortems.	Researched and wrote about k8s privilege-escalation paths (including a CVE for RCE/VM escape in minikube). Ran and hardened production clusters, and wrote custom k8s controllers for bespoke needs.

EXPERIENCE

Google DeepMind

Security SWE in a cross-team function. Owned cybersecurity safety evaluations, building the initial framework and running the external vendor engagements behind it. Threat modelled production ML deployments, driving remediations to resolution across engineering teams; adversarially tested image/text watermarks.

3 years

London, UK

Kaluza / OVO Energy

Tech Lead Security Engineer securing a large (100+ account) cloud organisation across AWS and GCP. Set security standards for 20+ engineering teams and ran org-wide remediation and uplift programmes, automating controls and fixing vulnerabilities with the teams that owned them.

2 years

London, UK

TrueLayer

Security Engineer promoted to Head of DevOps and Security, leading a team of three to scale infrastructure, mature DevOps practices, mitigate security risks and meet regulatory compliance. Set up and ran the Prometheus and Grafana observability stack. Owned external security vendor and pentest engagements end to end.

1.5 years

London, UK

MWR InfoSecurity

Security Consultant working on infrastructure and application security and red team simulated attacks, for clients across industries from finance to critical infrastructure.

4 years

London, UK

CERTIFICATES

OSCP, OSCE, CRT, CCT

Graduate-level MicroMasters credential in Statistics and Data Science (MITx)

BSc Ethical Hacking & Countermeasures (University of Abertay)
